

Opstation ERP

Onboarding Guide

A reference to every module, voucher and report in Opstation ERP.

Getting started

Recommended setup order for a new organization. Work top to bottom; each step builds on the previous one.

1. Branches	Create your locations (shops, warehouses, factory). Stock, POS and reports are scoped per branch; pick the active branch from the sidebar selector.
2. ERP Users & Permissions	Add your team under ERP > ERP Users and grant access module by module. Each user can be scoped to specific branches.
3. Chart of Accounts	Review the pre-loaded accounts (1000-6999). Add any accounts specific to your business before posting.
4. Units of Measure & Classifications	Define how you count items (pcs, litre, box) and how you group them, before adding products.
5. Products	Add your items with their UoM, classification and branches.
6. Opening balances	Enter Opening Stock for inventory and an Opening Journal for cash, bank, customer and supplier balances to start from your real position.

Inventory

Items, stock levels and the movements that change them.

Products	Master list of items with units, classifications and per-branch availability.
Branches	Your stocking locations; every quantity and valuation is tracked per branch.
Units of Measure	The units items are counted and transacted in.
Product Classifications	Categories and groups used to organize and filter products and reports.
Opening Stock	One-time entry of on-hand quantities and values when you go live.
Stock Transfers	Move stock from one branch to another with a documented in/out trail.
Stock Adjustment	Correct on-hand quantities for counts, wastage or errors; posts to the inventory adjustment account.
Stock Levels	Live on-hand quantity per item per branch.
Low Stock Report	Items at or below their reorder point, so nothing runs out unnoticed.
Stock Value Report	Current inventory valuation by item and branch.
Inventory Ledger	Every movement for an item - receipts, issues, transfers and adjustments - in date order.

Purchasing

The buy-side flow runs PO -> GRN -> Purchase Invoice, with returns and supplier reports alongside.

Purchase Dashboard	At-a-glance view of what is pending at each purchasing stage and how old it is.
Suppliers	Your vendor master with contact, terms and opening balances.
Purchase Orders (PO)	Order goods from a supplier; the starting document of the purchase flow.

GRN (Goods Receipt Note)	Record goods physically received against a PO; this is what increases stock.
Purchase Invoices (PI)	The supplier bill; posts the payable and finalizes cost. Lock it to close the cycle.
Purchase Return Notes	Send received goods back to a supplier; reduces stock.
Purchase Return Invoices	The financial credit for returned goods against the supplier.
Supplier Ledger	Full account history per supplier, including opening balance and reference type.
Supplier Aging	Outstanding payables bucketed by how overdue they are.

Sales

The sell-side flow runs SO -> DO -> Sales Invoice, with returns and customer reports alongside.

Sales Dashboard	Pending sales documents by stage with age, so nothing stalls.
Sales Orders (SO)	Customer order; the starting document of the sales flow.
Delivery Orders (DO)	Goods dispatched against an order; this is what reduces stock.
Sales Invoices (SI)	The customer bill; posts the receivable and revenue. Voucher numbers run as SI-YEAR-####. Lock to finalize.
Sales Return Notes	Goods returned by a customer; brings stock back in.
Sales Return Invoices	The financial credit issued to the customer for returns.
Sales Report	Sales performance with breakdowns you can drill into.
Customer Ledger	Full account history per customer, including opening balance.
Customer Aging	Outstanding receivables bucketed by how overdue they are.

Point of Sale (POS)

A fast counter-sales screen, isolated per branch, with its own catalog and cash controls.

Configuration	Set up POS behaviour and defaults for the branch.
POS Catalog	The per-branch list of items available to sell at the counter.
POS terminal	The sell screen for quick billing, payments and printing.
Customer History	Past POS purchases for a walk-in or registered customer.
Bills on Hold	Park an in-progress bill and resume it later without losing the cart.
Expense Management	Record counter cash expenses so the drawer reconciles.
Promoters & Commission	Attribute sales to promoters and accrue their commission automatically (posts to commission payable / expense).

Manufacturing

Turn raw materials into finished goods, track the shop floor, and account for waste and rework.

Production Floor	Live kanban of jobs by stage; play/pause processing with real-time status.
Product Assembly (BOM)	Define the recipe - components, labor and overhead - for a manufactured item.
Production Voucher	Consume components and produce finished goods per the BOM.
Job Card	A work order on the floor, with remarks and a shop-floor (no-price) print option.
QC Checkpoints	Quality gates a job must pass through before completion.

Production Inverse Voucher	Reverse a production run - break a finished item back into components.
Damage Stock Voucher	Write off damaged stock to the loss account.
Claim Processing Voucher	Process warranty or supplier claims on stock.
Production Waste Report	Material lost in production, by job and item.

Financials & Accounting

A full double-entry core. Every sales, purchase, POS and return document posts to the General Ledger automatically.

Chart of Accounts	The account tree (assets, liabilities, equity, income, expense). Control accounts (AR/AP) block manual entries.
Journal Vouchers	General-purpose double-entry adjustments between accounts.
Opening Journal	One-time entry to load opening balances for cash, bank, customers and suppliers.
Payment Vouchers (CPV)	Record money paid out (to suppliers or for expenses).
Receipt Vouchers (CRV)	Record money received (from customers or other income).
PDC Voucher	Track post-dated cheques in and out until they mature.
Trial Balance	Every account with its balance; the books in one screen.
Account Activity	Drill into the transactions behind any account.
Profit & Loss	Income statement for a chosen period.
Balance Sheet	Financial position - assets, liabilities and equity - as of a date.

CRM

Manage prospects and the relationship pipeline beyond the transactional customer record.

Customers	CRM contact and account records.
Pipeline	Deals on a kanban board moving through your sales stages.
Follow-ups	Scheduled tasks and reminders; overdue items surface as a badge.

HR

Basic people management for your team.

Employee Directory	Your staff master records.
Attendance	Daily attendance tracking.
Leave	Leave requests and balances.

Assets & Facility

Track what you own and keep your premises in order.

Assets	Fixed-asset register; items due for attention surface as a badge.
Facility	Facility and maintenance tasks; due items surface as a badge.

Field Operations (Opstation App)

The mobile companion for the field team. Everything captured syncs back to this panel in real time.

Order capture	Book customer orders on the spot, online or offline.
Deliveries	Run delivery routes and confirm drops at the doorstep.
Shop visits	Mark visits to shops and outlets in the field.
Collections	Record cash and payment collections at the counter.
Reimbursements	Log field expenses and reimbursements as they happen.

Reports (quick index)

Standalone reports. Most modules above also carry their own reports (aging, ledgers, dashboards, stock value, etc.).

Margin Report	Profit margin by sale, item or customer.
Customer Balance Report	Outstanding balances across customers.
Module reports	See Inventory, Purchasing, Sales, POS and Financials sections for their dedicated reports.

Controls & Administration

The oversight layer that keeps every branch and every book under control.

ERP Users & Permissions	Grant access module by module; scope each user to specific branches.
Branch scoping	Limit what data a user sees by branch via the sidebar branch selector.
Audit Trail	Every create, edit and void is logged with who did it and when.
Approvals & locking	Finalize a document to lock it; only authorized roles can reopen or reverse.
Global search	Jump to any document from one search box, scoped to your permissions.
Admin Settings	Organization-level settings and toggles.
Automated daily backup	Every night a full data export is emailed to your designated address - a clean copy always off the system.
Menu layout	Switch between top-bar and sidebar navigation from the toggle next to search; your choice is remembered.
